Dell Data Center Infrastructure

Performance, Reliable, & Handy Operation

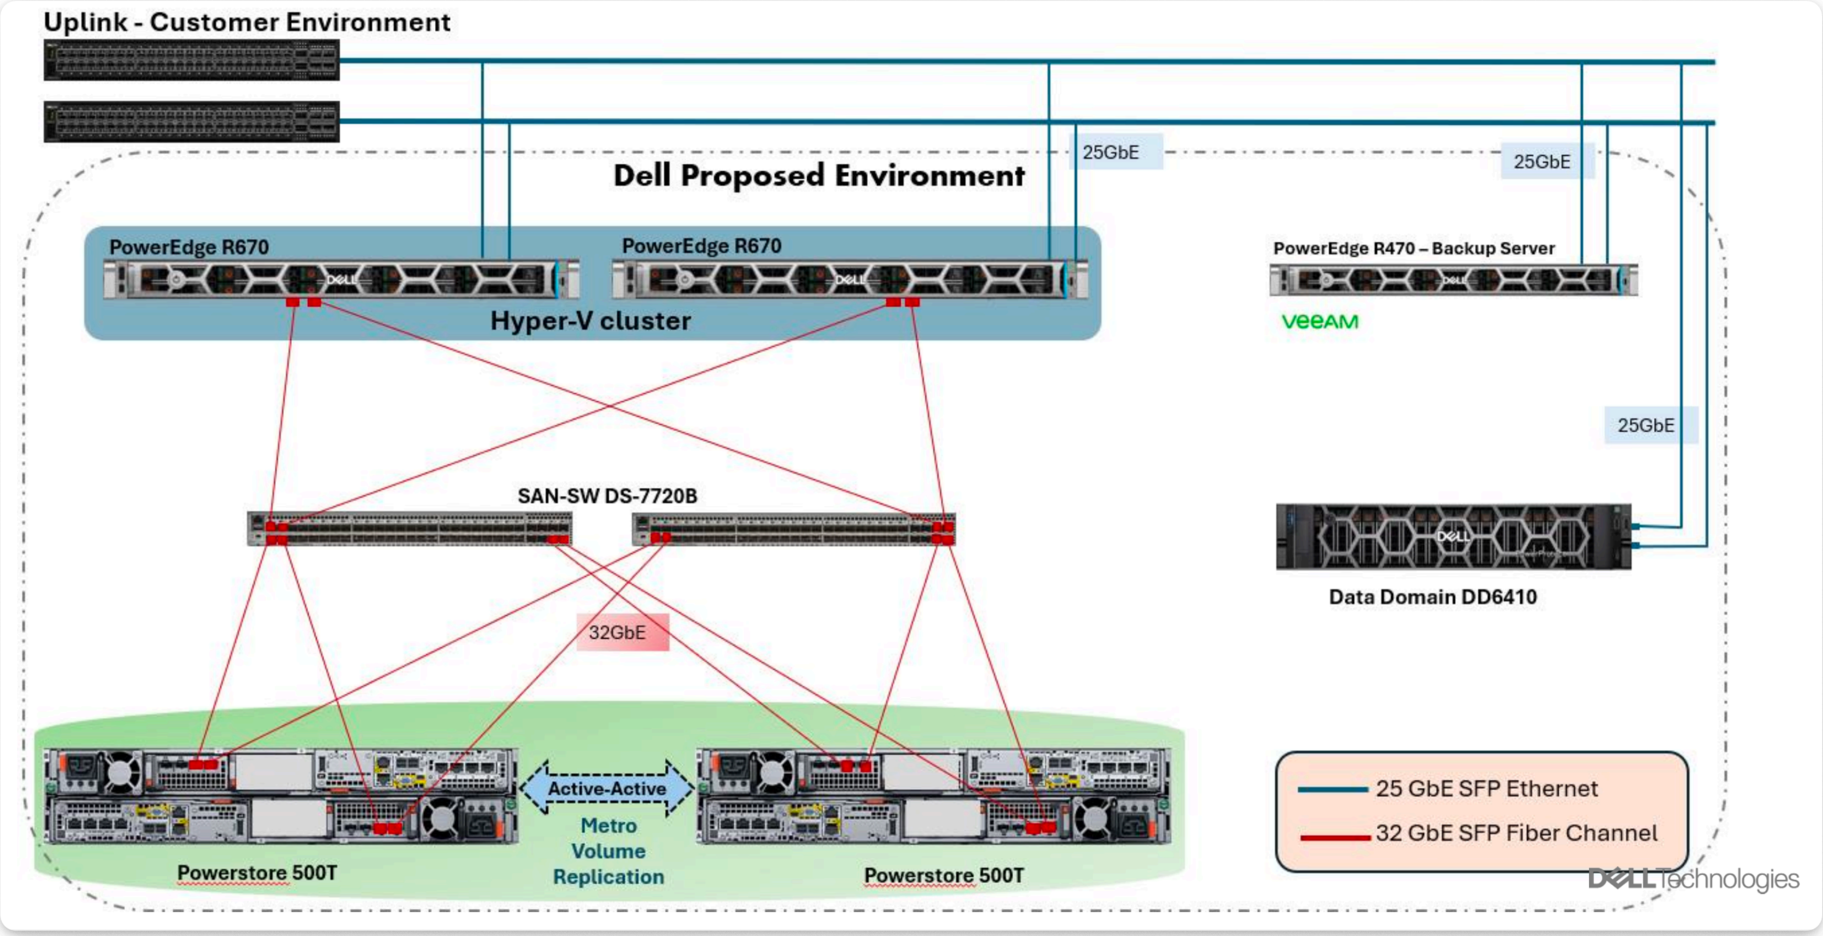
Minh Nguyen - Enterprise Engineer

01/2026

01

Topology

1.1 A NO SINGLE POINT OF FAILURE ENVIRONMENT



02

Server

2.1 POWEREDGE R670

2x PowerEdge 760: $\uparrow\uparrow$ Performance; $\downarrow$ space, $\downarrow$ power consumption.

○ 1U	○ 2x Xeon 6 6517P (3.2GHz, 16C/32T)
○ 8x 32GB DDR5 (256GB)	○ 2x 480GB Enterprise-grade SSDs
○ 4x 10/25GbE	○ 2x 32GB FC ports HBA

03

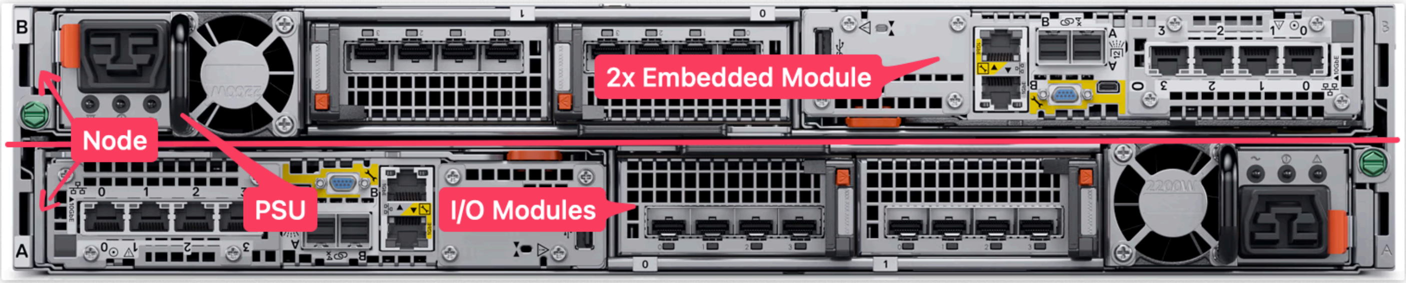
Storage

2x PowerStore 500T: Fast and Reliable.

○ 2U	○ Effective Capacity*	32.36 TB
○ 6x 32GB DDR5 (192GB)	○ Usable Capacity	20.06 TB
○ 15x 1.92TB NVMe SSDs	○ Raw Capacity	28.67 TB
○ 4x 10/25GbE	○ Data Reduction	1.61:1
○ 4x 32GbE FC ports	○ Total Drive Count	15 drives

*: Usable capacity is the capacity available after RAID & operation overhead. With a Data Reduction Ratio of 1.61:1, 20.06 TB x 1.61 gives approximately 32.36 TB of *effective capacity*. This means we can store up to 32.36 TB of data.

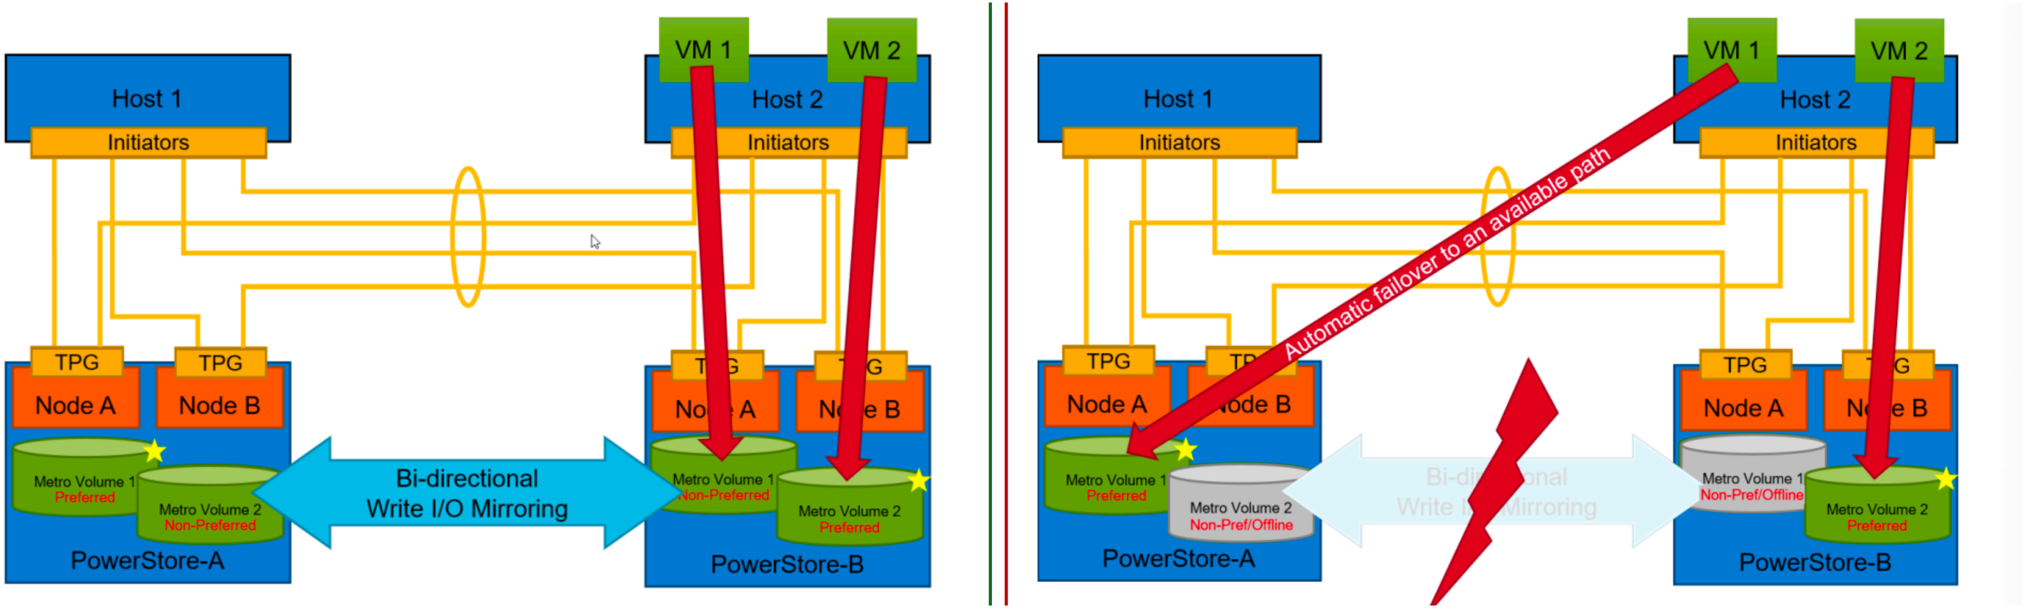
○ **All-Flash NVMe**	*ultra-low latency & high performance*
○ **Active-active controllers (A/B)**	with *load-balanced* data paths
○ **No downtime upgrades**	for *both* hardware and software
○ **Up to 5:1**	Data Reduction Ratio, more *space*
○ **Scale-up and scale-out**	more *flexibility*, non-disruptive scaling
○ **All features included**	*NO additional licenses* required



DESIGNED FOR **99.9999% AVAILABILITY**

Normal Operation

Metro Volume 1 Failure



- PowerStore Metro Volume provides *active-active*, *high-availability* storage across two PowerStore systems.
- If one PowerStore goes down, the hosts can *still access the volume from the other system.*
